

## Environmental Policy for Bäckebrons Sågverk AB

The company is a sawmill located in Bäckebron, approximately 50 km north of Karlstad. We process renewable Swedish forest resources into high-quality wood products. The company also operates a small planing mill. Balungstrand Sågverk is classified as a small-scale sawmill, and all sawmilling activities are carried out at this site. The company's operations are aligned with the traceability requirements of the international certification systems PEFC (PEFC/05-32-82) and FSC® (FSC-C143915).

The company strives to minimize negative environmental impacts on the Swedish forest.

### We achieve this by:

- Working to ensure that forestry is conducted in a sustainable and environmentally responsible manner.
- Complying with all applicable environmental legislation.
- Following all requirements and regulations related to FSC and PEFC.
- Not accepting timber from the following sources:
  - \* Illegal logging
  - \* Key biotopes, registered or unregistered
  - \* Forests with high conservation values
  - \* Forests where customary or civil rights are violated
  - \* Forests containing genetically modified trees
  - \* Natural forests that have been harvested for the purpose of converting the area to plantations or non-forest land use
- Ensuring that our environmental work is based on a holistic approach and carried out with the goal of continuous improvement, supported by ongoing competence development within the organization.
- Ensuring that key personnel involved in the company's FSC and PEFC Chain of Custody systems have knowledge of environmental management and understand how the environment is affected by our operations. All employees are informed about the company's environmental policy and are engaged in our FSC and PEFC efforts.
